SUMMARY

Data Scientist with nearly 5 years of experience in data analytics, proficient in SQL, Python, Excel, and Tableau. Filed a patent with the USPTO for a novel feature in video-based customer support, and holds an IBM Data Science Professional certification. Recognized with four performance awards, won a hackathon and was promoted twice within three years.

SKILLS

Machine Learning: Predictive Modeling, Supervised/Unsupervised ML, Feature Engineering, Data Mining, Data Cleaning, Data Wrangling, EDA, A/B Testing, Statistical Analysis; **ML & Data Tools:** Python, pandas, NumPy, scikit-learn, PyTorch; **Databases:** SQL, MySQL, PostgreSQL, Hive; **APIs & Model Deployment:** Flask, REST APIs, Docker, Heroku, AWS (Beginner); **Data Visualization:** Tableau, Seaborn, Matplotlib, Excel; **Version Control & Tools:** Git, GitHub.

EXPERIENCE

Senior Consultant, Heartland Community Network

Sep 2025 – Present

- Engineered and deployed 2 client websites using Wix, incorporating responsive UI and custom JavaScript logic to enhance user engagement and streamline functionality.
- Consulted with 2+ clients, including healthcare and retail small businesses, to gather requirements and translate them into user-friendly web solutions.
- Improved website performance, SEO rankings, and UX through continuous updates and optimizations.

Senior Data Scientist, [24]7.ai

Jun 2022 – Jul 2023

- Developed AR video-based customer support solutions for iOS and Web, improving resolution rates by 50% compared to traditional methods.
- Led 15+ POCs for an AR feature, securing a patent with USPTO - PCT/IB2023/050635.
- Collaborated with cross-functional teams to integrate AR solutions into the company platform.

Data Scientist, [24]7.ai

Jul 2020 – May 2022

- Introduced and implemented AR solutions using ARKit and computer vision to develop video-based customer support.
- Performed customer analytics reporting, generating ad hoc reports in Excel for stakeholders, delivering 10+ reports per month.
- Built and maintained a model performance dashboard using Hive, SQL, and Python to track 23 client predictive targeting models.
- Increased actionable insights by 40% by consolidating reporting and dashboard efforts.
- Created comprehensive JIRA-Confluence to document models, improving model transparency and accelerating team onboarding.

Analytics Consultant, [24]7.ai

Jan 2019 – Jun 2020

- Created Time on Page (TOP) and Page-Level Propensity to Purchase after Chat (P2PC) models, increasing chat propensity by 8%, RPC by 6%, and conversion rates by 12%.
- Deployed scalable predictive targeting models for 4 clients using Hadoop and FlashML for customer behavior modeling.
- Conducted detailed EDA, preprocessing, and anomaly filtering, improving model performance by nearly 5%.

PROJECTS

Heart Disease Risk Prediction API | Python, Scikit-learn, Flask, Docker.

Trained and optimized a heart-disease classification model (F1: 0.82, AUC: 0.89). Architected a production-ready API for real-time risk prediction with automated client-side testing and containerized the deployment for seamless portability.

Credit Card Fraud Detection Using Supervised and Unsupervised Learning | Python, Jupyter Notebook.

Performed fraud detection on 284K+ transactions using supervised and unsupervised achieving 93% accuracy and 85% fraud recall.

VitaFin: A Personal Health and Financial Data Visualization Dashboard | Flask, Python, HTML/CSS, D3.js JavaScript.

Built a full-stack interactive dashboard to track and analyze personal financial and health metrics by integrating real-time insights and benchmark comparisons. Rated highly usable by 88% of users.

Deep Learning Model for Image Classification | Python, Jupyter Notebook, PyTorch.

Designed a hybrid deep learning model combining DenseNet and ResNet architectures for CIFAR-10 image classification, showcasing model architecture optimization, feature abstraction, and training automation. Achieved an accuracy of 92.5%.

Multimodal Classification Model | Python, Jupyter Notebook, PyTorch.

Developed a fusion model combining a CNN for image data and an ANN for audio data to classify the multimodal MNIST dataset and achieved a validation accuracy of 98.92%. Emphasized representation learning and input heterogeneity through this model.

EDUCATION

Texas A&M University

Master's in Computer Science

Amrita Vishwa Vidyapeetham

Bachelor of Technology, Computer Science and Engineering

College Station, TX

Aug 2023 – May 2025

Amritapuri, Kerala

Aug 2015 – May 2019
